Investor Relations Update 26 May 2010

Aztech at Jurong Town Council Press Conference

Date: 25 May 2010

Venue: Jurong Town Council Main Office

Event: Press Conference on “Adoption of Light Emitting Diode (LED) Light Fittings for Public Housing in Jurong Town Council”

Aztech has been awarded a tender by Jurong Town Council to supply and install **Aztech 2-foot LED Luminaire with Fixture** at void decks, stairways and corridors of selected housing blocks in Jurong Town Council.

This project marks the first in Singapore to deploy eco-friendly, energy-efficient LED lighting for public housing. The customised LED lights will consume less power and help Jurong Town Council save up to S\$1.1 million in electricity bills annually. In a 10-month long trial conducted by the town council in December 2008, LED lights yielded 52% energy savings compared to fluorescent lights. LED lights are also brighter and can last about 50,000 hours or 10 years, compared to 10,000 hours for fluorescent lights. During the trial, the town council did not receive any complaints from the residents.

The selection of LED lighting provider was through a stringent process to address the town council's concerns. Aztech was selected due to its R&D expertise and ability to meet the stringent requirements.

The LED lighting project will be registered as Singapore's first Programmatic Clean Development Mechanism (P-CDM) project in the United Nations, which will allow Jurong Town Council to trade in carbon credits. In addition, the other 14 town councils in Singapore have been encouraged to go the same way in the adoption of LED lights.

Objective: This was an opportunity to showcase Aztech's LED lighting products as well as its strengths in R&D and manufacturing. At the exhibition booth, Aztech displayed its range of LED lights which are:

- **Eco-friendly** – Lower energy consumption and less greenhouse gas emissions
- **Cost-effective** – Lower power consumption leads to lower electricity bill
- **Long Life Span** – Longer operating life means less replacement and maintenance
